Rolling Work Table | Assembly Guide

1 Check your parts

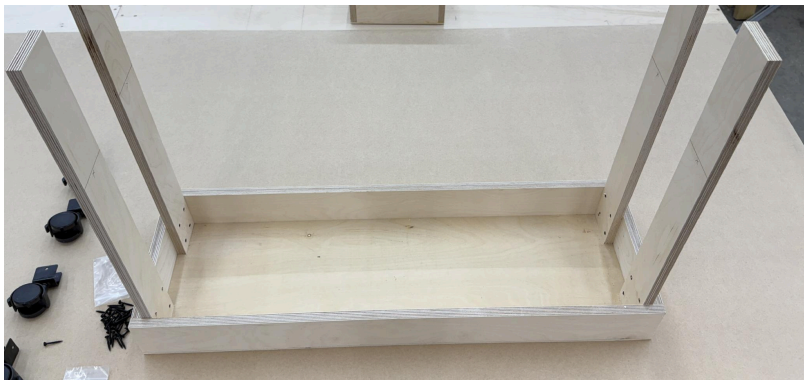

Before you begin, unpack the components and check that all parts and hardware are present.

- ☐ 1 large module (tabletop)
- ☐ 1 small module (lower shelf/tray)
- ☐ 4 legs
- ☐ 4 wheels
- ☐ 1 bag of long screws
- ☐ 1 bag of short screws
- ☐ 1 assembly bit (not pictured)
- ☐ 2 scrap support blocks (not pictured)

2 Attach the four legs

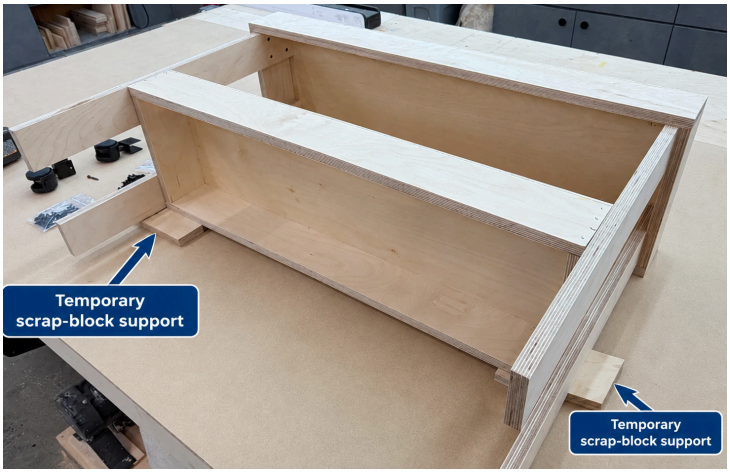

Using the long black screws, secure each leg in a corner of the **large module** with four screws per leg. Orient the flat side of each leg parallel to the short side of the module, as shown.

3 Position the lower module

Carefully lay the assembly on its side and place the smaller module between the four legs. Choose the orientation you want: a flat shelf (flat surface facing up when finished) or a storage tray (recessed side facing up when finished).

ALIGNMENT TIP The legs sit recessed inside the upper module. Place the two temporary scrap blocks beneath the legs and lower module to raise and support the pieces while you align them. This helps keep the legs and lower module parallel before fastening.

The pencil marks on the legs indicate a suggested position for the lower module. You can adjust the height to your preference.

4 Secure the lower module

With the lower module aligned, attach it to the legs using the long screws. You can drive the screws through the outside of the legs into the lower module, as pictured, or from inside the lower module into the legs to keep the screw heads less visible.

You may need to shift the legs slightly to get the surfaces flush. Remove the temporary support blocks after the lower module is secured.

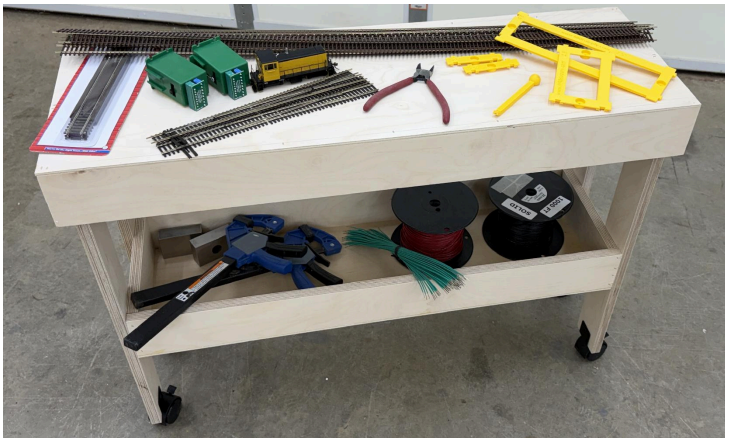

5 Install the wheels

Using the **short screws**, attach one wheel to the bottom of each leg. Position each U-shaped bracket flush with the outside edge of the leg to promote stability.

6 Stand the table upright

Carefully turn the table upright onto its wheels. Check that all four wheels are attached securely and the table is stable before use.

Your rolling work table is ready to use.

Enjoy!
